

Code.org Saves 2,400 Engineering Hours a Year with CodeSignal

2,400

Engineering hours saved on recruiting

\$191k

Recruiting cost savings

\$720

Reduction in average cost per hire

Challenge

When Code.org received 1,000 resumes for one open internship role, they knew they needed a better way to select candidates to advance—one which didn't require their engineers to manually review every resume. They also needed a solution that provided an objective signal of candidate skill to ensure their process was fair.

Solution

In 2023, Code.org adopted CodeSignal's Pre-Screen and Interview products to screen all candidates for their engineering roles and provide a consistent experience throughout their process. By doing so, Code.org was able to hone in on qualified applicants sooner and remove one interview stage from their engineer hiring process.

Results

Since adopting CodeSignal, Code.org has **saved over 2,400 hours** in engineering time previously spent on recruiting and reduced their technical recruiting costs by over \$190k.

When someone goes through CodeSignal, we can be confident it's worth investing 6 hours of our engineers' time to interview them.

— **Vijaya Manohararaj**, Engineering Manager
