Make cheating and leaked questions a concern of the past

Rest assured that your candidates' results are their own with CodeSignal's multi-layered approach to preventing and detecting cheating or plagiarism, including cheating via AI tools like ChatGPT.

Leak Sweep   ADDITIONAL PROTECTION

CodeSignal has a copyright on all of the content on our platform. Leak Sweep, our proprietary technology, searches for leaked questions and flags them to our team. Armed with this information, we can replace leaked questions and request DMCA takedowns.

Online Proctoring & ID Verification   ADDITIONAL PROTECTION

Through video, screen, and audio recording, our proctoring team is able to identify any cheating or plagiarism attempted during the assessment. Our proctors also check government-issued IDs to validate the identity of the candidate taking the assessment.

Suspicion Score   ADDITIONAL PROTECTION

Your candidate's solution is automatically cross-checked against our database of all solutions submitted, and our plagiarism detector crawls the web to look for similar solutions. Our Suspicion Score flags potentially suspicious activity from a variety of sources, including AI-aided plagiarism, previous candidate submissions, and more.

FOUNDATION

Certified Evaluations

Our unique framework-based approach to creating interview and assessment questions enables us to create variations at scale, without compromising validity or introducing new levels of difficulty. To further mitigate leaking or cheating, we actively rotate and refresh the questions on an ongoing basis.
