

Cohesity Scales Up Recruiting Operations with CodeSignal

Reduced

Valuable engineering time spent on hiring

Shortened

Their overall recruitment timeline

Identified

And secured high quality candidates

Challenge

Revolutionizing data management is a tall order, and with clients including NASA and the IRS, Cohesity needed to reduce the time burden that recruiting placed on its engineering team while still ensuring that candidates had the technical skills needed to thrive.

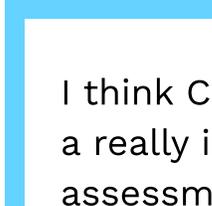

Solution

Cohesity utilizes [CodeSignal Pre-Screen](#) as a top-of-funnel screening tool, saving time for the engineering team while still filtering for top talent. CodeSignal's Coding Score is validated by IO Psychologists and incorporates multiple anti-plagiarism measures, ensuring that it's an objective measure of a candidate's skills that Cohesity can trust.

Results

Cohesity was able to **reduce engineering time spent on hiring** and **shorten their overall recruitment timeline** while still ensuring they were identifying and securing highly qualified candidates.

Talk to an expert today and explore how you can improve your technical recruiting process. Email sales@codesignal.com or visit codesignal.com/demo.

I think CodeSignal is a really important assessment at the top of the funnel because it just provides a really non-biased assessment of how a candidate is going to perform on technical interviews.
