

Galvanize Enhances Coding Education with CodeSignal

Improved

Overall student experience

Saved

Valuable time

Boosted

Productivity for staff

Challenge

Head of Curriculum Fred Zirdung found that Galvanize's methods for conducting diagnostic assessments for its bootcamp students were producing inconsistent results. This meant that instructors and administrators were losing productivity, and students weren't receiving the best education they could.

Solution

Galvanize partnered with CodeSignal to conduct their start- and end-of-program assessments for their students. With a library of 4,000+ questions, support for more than 40+ languages, and state-of-the-art IDE, Galvanize was able to use CodeSignal to create relevant, consistent, and reliable student assessments.

Results

Galvanize was able to **improve student experience** while also **saving time** and **boosting productivity for instructors and administrators** alike, helping them give their students an award-winning education.

Prior to CodeSignal, we had written a lot of our own diagnostic tests, which produced inconsistent results. Once we added CodeSignal to the mix, we got better results, less staff overhead, and just happier students.
