

Industry Dive Goes Deep to Fuel Growth with CodeSignal

Created

A more efficient & consistent process

Boosted

Equity by evaluating candidates holistically

Challenge

Industry Dive found it challenging to keep hiring at pace with its rapid growth. They had technical screening methods in place, but they were time-consuming and inconsistent, producing less-than-ideal results.

Solution

Industry Dive turned to [CodeSignal Pre-Screen](#) to rework their hiring process. Pre-Screen helped them roll out consistent technical skill evaluations at scale, making their hiring process more efficient. Moreover, Pre-Screen's keystroke recording and replay features gave them deeper insight into candidate skill, helping them make better-informed hiring decisions.

Results

Industry Dive was able to **make their hiring process more efficient and consistent while simultaneously boosting equity** by evaluating candidates objectively using job-relevant criteria.

Talk to an expert today and explore how you can improve your technical recruiting process. Email sales@codesignal.com or visit codesignal.com/demo.

[CodeSignal] shows me something that I didn't get when I just had a take-home test [...] I can watch how they thought through the problem, and that was honestly more interesting to me than even the score at the end.
