CodeSignal

OpenSesame Takes Back Engineering Time with CodeSignal

OpenSesame

90%
Growth in their technical team, in just one year

Reduced
Valuable engineering time spent on hiring

Supported
Diversity initiatives with a more efficient recruiting process

Challenge

OpenSesame knew that top-of-funnel technical screenings were the best way for them to filter through candidates - but creating, maintaining, and administering coding assessments quickly became too time-consuming to do on their own.

Solution

OpenSesame streamlined their technical skills evaluations with CodeSignal Pre-Screen. The hiring committee members were able to assess a large volume of candidates in an efficient and scalable manner. By identifying the top candidates and leveraging the insights from their coding replays, OpenSesame delivers a highly relevant interview experience for their candidates and makes data-driven hiring decisions.

Results

OpenSesame **reduced engineering time spent on hiring** while still growing their technical team by **90% in one year.** They also **bolstered diversity initiatives** by using CodeSignal to create a more efficient recruiting process.

My favorite part [of CodeSignal] is being able to quickly set up an assessment, share it with candidates, and then be notified once they have completed it —it can all be done in under a minute.
